

Coolant Testing

Our coolant testing process is a proactive approach to maintaining the health and longevity of your cooling system. Additive checks provide you with the levels of nitrites and molybdates used as corrosion inhibitors. Glycol Percentage identifies the effective freezing and boiling points. We will deliver all the information you need to keep your cooling system operating at maximum efficiency.

Test Packages	CA1	CA2
Glycol %	X	X
Freeze Point	X	X
Boil Point	X	X
pH Level	X	X
Conductivity	X	X
Additives Check	X	X
Total Ferrous Debris	X	X
Oil Contamination	X	X
Color	X	X
Odor	X	X
Precipitate	X	X
Foam	X	X
14 Elements		X
9 Compounds		X

X = Performed as standard O = Performed as required
